Cytokines

For Expansion, Differentiation and Characterization of Human Immune Cells.

- Monocytes
- CD8⁺ T Cells
- CD4⁺ T Cells
- B Cells
- Neutrophils
- Eosinophils
- Basophils
- NK Cells
- M1 Macrophages
- M2a Macrophages
- M2b Macrophages
- M2c Macrophages
- Dendritic Cells

Tools for Your Immune Cell Research

- Cell Isolation Reagents
- ELISA
- Antibodies

Why Use Stemcell’s Cytokines?

- Consistency: Endotoxin levels of ≤ 0.2 EU/µg ensure consistency and reproducibility across multiple applications.
- Variety: Choose from a wide range of human, mouse and rat cytokines, in a variety of sizes from 10 µg to 1 mg.
- Animal-Free: ACF recombinant proteins are produced in E. coli and have no trace of animal or human components, guaranteed.
